

## SYSTEMS AND METHODS FOR OVERCOMING STICTION

### ABSTRACT OF THE DISCLOSURE

A number of methods and systems for overcoming stiction are provided. The systems  
5 include electro-mechanical systems capable of exerting a variety of forces upon areas prone  
to stiction. The systems can be MEMS arrays or other types of devices where stiction related  
forces occur. The methods include a variety of ways of causing movement in areas prone to  
stiction forces. Such movement can be vibrational in nature and is sufficient to overcome  
stiction, allowing a trapped element to be moved to a desired location.
